DUAL BAND HYBRID DRA ANTENNA DESIGN FOR WLAN APPLICATION

Abstract

The Dielectric resonator seems to be a good alternative for Micro-strip Patch Antenna (MPA) due to its ability to resonate at high frequencies more efficiently. When only DRA is used we require high complex structures such as superstrates to get the optimum results at the desired frequencies, so we prefer Hybrid DRA over simple DRA. Hybrid DRA means there is a micro-strip patch which is used for exciting the DR and since the radiating element is DR there will be no conductor losses and surface waves. The impedance bandwidth is improved by 10% when we use Hybrid DRA. The design is simulated using HFSS tool for the two resonant frequencies at 2.8 GHz and 5.6 GHz.

Keywords: Dielectric Resonator antenna, Dual Band DRA, Hybrid DRA, Cylindrical DRA, offset well, Dual Band.

EVALUATION OF REMOVAL OF METAL IONS FROM WASTE WATERS USING CONVENTIONAL AND
NEW TRENDS

Oguri Sreedevi

Department of Chemistry, Dr. A. P. J. Abdul Kalam University, Indore

Abstract- Heavy metal pollution is one of the most serious environmental issues of our time. Heavy metals must be treated because of their persistence in the environment. In recent years, numerous techniques for removing heavy metals from wastewater have been extensively researched. This paper analyses and reviews the current heavy metal wastewater treatment methods in use. Chemical precipitation, ion exchange, adsorption, membrane filtration, coagulation, flotation, and electrochemical techniques are some of the technologies used in these processes. Sewage that contains heavy metal ions is thought to be a serious threat to air degradation. Heavy metals are serious-ecological pollutants because the large percentage of them are harmful, about there ions really aren't compostable, and they tend to accumulate in the soil and in living organisms. As a result, the water is cleaned and the heavy metal ions are eliminated. Wastewater management is essential for maintaining both the climate and, consequently, population health. Adsorbent is the most widely used technique for extracting the metal ions from substantial quantities of aqueous medium.

Keywords: Heavy Metal Ions, Adsorption, Conventional Adsorbents, Carbon Nano-tubes.
